                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and colyneptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The colynucleotides are also used in diagnostics as expressed sequence tags (C for identifying expressed genes. (I) is useful in gene therapy techniques (I). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or c quantitating a polypeptide in tissue, as molecular weight markers and as ca food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating (II) are treating (II) are treating (II) a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to new polynucleotides and polypeptides, useful for diagnosis and treatment of breast, lung and colon cancer. The sequences can be used in detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous. They can also be used to inhibit tumour growth by modulating expression of a gene product. AAS36943-AAS39338 represent novel human diagnostic and therapeutic coding sequences of the invention.

CC also known as stress kinase inhibitor protein (SKIP-II) polypoptide. The CC htrb polypoptide is useful for inhibiting an AP-1 mediated inflammatory cc signal in a cell. The polypoptide employed in the method is preferably cc htrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3 N htrb-3 N htrb-3 C, or cc htrb-3, htrb-1 N thrb-1 C, htrb-1 N C, htrb-3 N htrb-3 C, or chrb-3 N C. It is also useful for providing htrb agonist activity for cc activating an ERK-mediated signal e.g. AP-1-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an cell thrb modulators are useful for modulating AP-1 mediated signal, or a pMA induced signal, cf in a cell. Htrb modulators are useful for modulating AP-1 mediated completed inflammatory signal in a cell such as tumor necrosis factor (TNP) cr induced inflammatory signal, or an interleukin induced inflammatory cand in therapeutics are useful in screening assays, predictive medicine are useful in screening assays, predictive medicine cr signal htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abhormal htrb activity, such as rheumatoid archititis, diabetes, compounds e.g. for treating and/or preventing diseases caused by abhormal htrb activity, such as rheumatoid archititis, diabetes, compounds e.g. for treating and/or preventing diseases caused condicates; on the htrb therapeutics are useful for antagonizing conditions. The htrb therapeutics are useful for antagonizing conditions and inflammation or autoimmune disorders. The present sequence represents axx

cc ischaemia-reperfusion injury, shock, sepsis, immune responses, and is cc involved in increasing haematopoiesis, stem cell survival, bone growth cc and remodeling. (I), (II) and modulators of (II) are useful for creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of creating transgenic animals useful for studying the in vivo activities of central and transpersent in a discuss which as alzheimer's, can brain tissue and is useful cell and regeneration of nerve continues, in addition, (I) is involved in chemotactic or chemokinetic catching, regulation of haematopoies and is useful for treating myeloid cor lymphoid cell disorders, platelet disorders such as thrombocytopenia cor ulcars, for treating osteoporosis, osteoarthritis, bone degenerative culcars, for treating osteoporosis, osteoarthritis, bone degenerative cor gut protection or regeneration and treatment of lung or liver fibrosis, creations and creatment of lung or liver fibrosis, cor eactions and conditions, such as athmodefictency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, the addition, (I) affects biorhythms or circadian cycles of rhythms, catabolism, catabolism, storage or elimination of catabolism, catabolism, anabolism, storage or elimination of catas an antigen in a vaccine composition to raise an continue response. AAS44920-AAS45295 represent novel human secreted protein conding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

During sequence assembly data is compared from overlapping clon
                                                                                                                                                                                                                                                                              HS1103G7
HS3170 bp DNA linear PRI 08-FBB-2001 Human DNA sequence from clone FS-1103G7 on chromosome 20p12.2-13. Contains up to three novel genes, the gene for a novel protein similar to mouse VMP, the gene for a novel protein kinase domains containing protein similar to phosphoprotein C8FW and rat NIPK, and the SOX22 gene for SRY (sex-determining region Y)-box 22. Contains five CpG islands, ESTs, STSs and GSSs, complete sequence. AL034548
AL034548.25 GI:7263904
HTG; CpG island; NIPK; protein kinase; SOX22; SRY; VMP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence is the entire insert of clone RP5-1103G7 This sequence was finished as follows unless otherwise notects: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Purther information can be found at http://www.sanger.ac.uh/HGP/Chr20
RP5-1103G7 is from the library RPCI-5 constructed by the Spiter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
